OTHMANE SABI

FULL-STACK DEVELOPER | CRM, SAAS PLATFORMS & AUTOMATION

PHP/Laravel | Vue.js/React | TypeScript | MySQL | Docker | CI/CD

Ottawa, ON | sabi.othmane@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL PROFILE

Full-stack developer with **5+ years** of experience across **SaaS platforms, enterprise CRM, e-commerce** and **business integrations.** Strong backend/full-stack depth in **Laravel, TypeScript, Vue.js/React,** Python, SQL and Linux, with production ownership and application modernization experience. Delivered **SAP-to-CRM integrations,** automated transactional workflows and contributed to SaaS architecture. Uses **Docker and CI/CD pipelines** in day-to-day delivery, with growing **AWS** experience. Works closely with teammates, product owners and non-technical users in small, cross-functional teams.

IMPACT & PRODUCTION KPIs

2x **DEPLOYMENT FREQUENCY** CI/CD delivery	**-40%** **LEAD TIME** Change delivery	**<2h** **MTTR** Prod incidents
99.9% **AVAILABILITY** Production target	**-35%** **P95 API LATENCY** Performance	**-30%** **CHANGE FAILURE RATE** Release quality

CORE TECHNICAL SKILLS

BACKEND & APIs : PHP/Laravel | Java/Spring Boot | Python | REST APIs | OOP/SOLID | Redis | microservices | event-driven patterns
FRONTEND : TypeScript | JavaScript ES6+ | Vue.js | React | Next.js | Redux | Nuxt | Livewire | Tailwind | responsive web apps
CLOUD & PLATFORM : AWS | Docker | GitHub Actions | GitLab CI | Linux
DATA & INTEGRATIONS : MySQL | PostgreSQL | SQL Server | SAP-CRM | third-party APIs | queues | caching | reporting
ENGINEERING : system design | automated testing | code review | CI/CD | incident troubleshooting | Agile/Scrum | mentoring
SOFT SKILLS : problem solving | autonomy | communication with non-technical users | teamwork | explaining technical choices

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Contract, Remote) - CRM & Business Operations | **Akawatt Energy Services** | 2025 - Present

- Centralized sales, stock, invoicing and payments in a **5-module CRM,** ending manual Excel tracking and securing financial data with role-based access.
- Delivered management dashboards and a field-team module giving a small company **real-time visibility** on operations (Laravel REST API, Filament admin app, React client app).
- Made the CRM multi-tenant with stancl/tenancy (shared database + tenant_id), so it can be sold as **SaaS** to other companies.
- Automated releases with GitHub Actions running tests and database migrations before each deploy to Laravel Cloud with Docker.

Software Engineer - SaaS Applications | **Disklosure** | 2024 - 2025

- Collaborated with a team of 4 developers, a manager and a product owner to design and evolve an ESG/HSE SaaS platform, with full-stack ownership across architecture, APIs, data and user experience (Laravel, Vue.js, Inertia.js).
- Increased **deployment frequency by approximately 2x** and cut the **change failure rate by approximately 30%** through standardized Git workflows, automated testing and repeatable CI/CD pipelines.
- Cut **lead time for changes by approximately 40%** through reusable components, pull request reviews and delivery automation.
- Mentored a junior developer through code reviews, from our Storybook component documentation to integration in the codebase.

Software Engineer - Enterprise Integrations & Platform | **Petrom** | 2023 - 2024

- Designed and implemented, within a team of 4 developers, a Java/Spring Boot and Laravel microservices architecture replacing a legacy PHP CRM supporting **100+ service stations,** migrated module by module with a gradual rollout.
- Developed SAP-to-CRM integrations (SOAP APIs, Laravel queued jobs) automating invoicing, data synchronization and reporting, with error handling and recovery logic.
- Reduced **p95 API latency by approximately 35%** through indexing, query rewrites, shorter transactions and Redis caching.
- Restored the CRM after an outage caused by excessive API calls from a client's ERP integration: traced the root cause and added per-client rate limiting.
- Added real-time updates over WebSocket (Laravel Echo, Pusher), so users see CRM changes without reloading.
- Maintained a **99.9% availability target** and resolved production incidents in **under 2 hours (MTTR)** by strengthening logs, release procedures and Linux troubleshooting.
- Built an LLM-powered reporting prototype: a chat assistant in the Laravel CRM backed by a Python/LangChain microservice and a self-hosted Ollama model, turning French questions into SQL on MySQL CRM data **in under 15 seconds;** tested with real users, replacing Excel searches.

Software Engineer - CRM Automation & APIs | **Smart Call Distribution (now TalkLab)** | 2022 - 2023

- Integrated vTiger CRM with Plecto through webhooks to provide **real-time sales KPIs** to managers and sales teams (Laravel, Vue.js).
- Automated **100%** of a previously manual subscription-billing calculation workflow, eliminating recurring billing errors.

Full-Stack Developer - E-commerce & Business Applications | **Health Innovation** | 2019 - 2020

- Eliminated manual Excel reporting for **100+ medical delegates** by building a web app that automated daily report checks, dashboards and weekly synthesis by area, city and delegate.
- Built a para-pharmacy e-commerce site with **4,000+ products,** card payments, refunds and order changes (Laravel, Vue.js, Docker).

SELECTED PROJECTS

Event-Driven Enterprise Integration | REST APIs, queues, retry, idempotency, DLQ

- Designed a resilient asynchronous flow inspired by SAP-CRM work, with deduplication, metrics and error handling, so failed messages are recovered without duplicates.

SELECTED ENGINEERING IMPACT

- **DORA / Delivery:** 2x deployment frequency, -40% lead time and -30% change failure rate as delivery KPIs.
- **Reliability:** 99.9% availability target, <2h MTTR and incident runbooks to strengthen production readiness.
- **Performance:** p95 latency, error rate, throughput and cache hit ratio used to measure and explain optimization work.
- **Integration:** 100% billing automation + 100+ station CRM scope demonstrate business impact and enterprise scale.

TECHNICAL TOOLKIT

SOFTWARE : PHP/Laravel | Java/Spring Boot | Python | TypeScript | JavaScript | Vue.js | React | Nuxt | Filament | PHPUnit/Pest/Playwright

CLOUD / PLATFORM : AWS | Docker | GitHub Actions | GitLab CI | Linux

DATA / INTEGRATION : MySQL | PostgreSQL | SQL Server | Redis | SAP integration | SOAP | indexing | relational modelling

TOOLS : Git | Jira | ClickUp | Postman | Cursor | Claude Code | AWS Cloud Practitioner (in progress)

EDUCATION

- **Master of Science - Software Engineering & Web Applications** | Faculty of Science and Technology | 2019 - 2021
- **Bachelor of Applied Science - Software Engineering** | National School of Applied Sciences | 2018 - 2019
- **Specialized Diploma - Software Development** | OFPPT | 2016 - 2018
